## Aafko Scheringa joins Electrochaea as Senior Director Sales

**Planegg/Munich, 8 February 2022** - Aafko Scheringa is the new Senior Director Sales of power-to-gas specialist Electrochaea. With this newly created position, the company continues the commercialization and global roll-out of its unique biomethanation technology.

Electrochaea has developed a market ready technology that uses biomethanation to produce climate neutral gas by reusing CO<sub>2</sub> and adding green hydrogen. The gas that is produced can replace fossil natural gas, thus reducing greenhouse gas emissions, storing intermittent renewable energy and preserving valuable investments in existing gas distribution, storage and end use infrastructure.

Scheringa is a highly experienced international sales specialist. Before joining Electrochaea, he was Global Account Manager with Paques Technology BV, one of the world's leading companies in the development and construction of biotechnological purification systems for wastewater and gases. For over 13 years, he was responsible for the capital sales management in Northern America and Northern Europe. Prior to that, he spent six years as a sales engineer for the global U.S. chemical company Nalco Chemical. Scheringa is a chemical engineer with degrees from the Hanze University of Applied Sciences, Groningen and Utrecht University. His responsibilities at Electrochaea include the development of business with international customers with a focus on contract and transaction closings. Scheringa reports directly to Managing Director Mich Hein.

"We are now igniting the next growth stage of Electrochaea. Aafko Scheringa's many years of technical expertise, his market knowledge, extensive international network and outstanding track record make him the ideal person to take sales of our technology to a whole new level. This will give us an additional and distinct advantage to quickly penetrate markets in Europe and North America as well as new emerging markets," says Mich Hein, CEO and Managing Director of Electrochaea GmbH.

**About Electrochaea GmbH:** Electrochaea provides technology to produce renewable methane, a fuel that replaces natural gas and can be stored and transported in the existing gas grid. Electrochaea's patented process combats climate change by using CO<sub>2</sub>, producing a renewable fuel, and providing a solution for long-term storage of intermittent renewable energy. The company plans to deploy its technology with partners to produce more than 15 billion cubic feet per year of renewable methane by 2025. Industrial-scale pilot plants have been commissioned in the U.S., Switzerland and Denmark. Electrochaea is headquartered in Munich, Germany, with subsidiaries in Denmark and the United States.
